

MANAGE

CAPABILITIES

- IT ADMINISTRATION

We design, implement and manage network infrastructure, servers, desktops and peripherals.

- FACILITY MANAGEMENT

We manage your facility utilizing CAFM, keeping your facility aligned with your business plan.

- ASSET MANAGEMENT

We install and implement asset tracking systems to monitor and maintain your furniture and equipment.

- PROJECT MANAGEMENT

We work with your existing vendors to provide overall project continuity.

MANAGE SOLUTIONS THAT PREPARE YOU FOR THE BUSINESS STORM

At the "Manage" entry point, Spatial DTI focuses on the management of your people, furniture and equipment; or your assets. Your assets establish the criteria from which your entire facility will be managed. A change in your assets typically means a change to your facility. Our philosophy is to manage these assets as a single entity. This guarantees coordination between the multiple disciplines involved in hiring new employees, procuring furniture and maintaining IT equipment. Having a single point of accountability reduces

the margin for error and the risk of duplicating efforts. Already working with a vendor? We can manage your facility and bring continuity to the facility management process, or oversee the entire facility lifecycle by assisting in the design and relocation of your facility. Our goal is to make sure your organization remains productive in its existing facility, or transitions to a new facility with minimal interruptions, on schedule and within budget.
