

MOVE

CAPABILITIES

- **RELOCATION PLANNING**

We provide the logistical planning to get your people, furniture and equipment to your new facility.

- **DISCONNECT/RECONNECT**

We prep IT assets for relocation and assist in getting your systems back online in a timely manner.

- **DATA CENTER RELOCATION**

We provide the expertise for the safe transportation and reconnection of your data and voice systems.

- **PROJECT MANAGEMENT**

We work with your existing vendors to provide overall project continuity.

MOVE SOLUTIONS THAT PREPARE YOU FOR THE BUSINESS STORM

At the “Move” entry point, Spatial DTI offers various solutions to meet your relocation needs. Our move process focuses on maintaining your business operations throughout the relocation process. We tailored a relocation plan to minimize downtime, disruptions, and lost revenue. We work with your management staff to overcome the logistical challenges in relocating departments, personnel and equipment. We can supplement your IT staff by providing disconnect/reconnect services on data/voice IT assets including cable management solutions. Do your IT

assets include servers? We specialize in the break down, transportation and the reconnection of rack mounted data and voice systems. Already working with a vendor? We can manage your project and bring continuity to the move process, or the entire facility lifecycle with designing and managing your facility. Our goal is to make sure your organization transitions from your existing facility to your new facility with minimal interruptions, on schedule and within budget.
